

Tech Lead - Senior C++ Developer - Algorithmic Trading/Low Latency Paris (France) - 75008

Azur IM is looking for a talented Tech Lead - Senior C++ Developer who will partner directly with a group of Traders and Senior Developers to build and maintain the core components of its low latency trading infrastructure. This is an opportunity to join a growing team in a fast-paced and collaborative environment.

Who We Are

AZUR IM is a quantitative investment manager founded in 2019.

The company is headquartered in New York and has a presence in multiple locations in Europe, including a Paris subsidiary. AZUR is a Millennium platform company.

What We Do

AZUR IM is leveraging technology and advanced quantitative analysis to design and implement trading strategies on global financial markets.

Responsibilities:

- Design, develop and maintain a wide variety of modules within our trading infrastructure,
- Guide and advise the team on the next generation of trading systems and technologies, build them and integrate them in our current infrastructure.

Required skills/experience:

- Degree in Engineering, Computer Science or related subject
- Experience in C++ is a must
- Experience building low latency trading systems on Linux is a must
- Advanced knowledge of algorithms and data structure
- Detail oriented, demonstrates thoroughness and strong ownership of work
- Good team player with a strong willingness to participate and help others

To apply for this position, please send your resume to azur-careers@azur-im.com.
